DIY Mask

What You Need

- Sock (or leggings)
- Coffee filter
- Scissors

How To Do It

1. Take the sock and cut off the heel and the toe.

2. Make a cut on the sides of the ends of the sock that are about ½ – ¾ of an inch, about halfway up the sock. These will make the straps that go over your ears. Pull on the straps so you can see the mask shape.

3. Take a coffee filter and place it over the mask. Fold the filter’s edges so that it fits into the pocket of the mask. Then put the filter into the pocket.

4. Try on your mask and admire your work!
